RE: Cygnus Inc. Introduces New Wood Collection of EHR Workstations

Petoskey, Michigan based Cygnus Incorporated has a new addition to our complete line of wall mounted medication storage, EHR workstations and charting stations. These new cabinets can feature beveled inlays or a smooth finish for a sleek modern look.

As care facilities move towards a less industrial environment, it is important to have technology enclosed in a cabinet that has the appeal of fine furniture. The new **BayView Collection** offers distinctive designs, profiles, colors, finishes, inlaid panels, and moldings.

The panels are **environmentally responsible** in that the panels are produced in a Environmentally Preferable Product (EPP) Downstream facility. When combined with the wide variety of innovative and durable decorative overlays available today, wood-based composite panels create consumer products that are a great choice for environmentally conscious consumers.

Robert Waugh, President of Cygnus, says, "We're thrilled about the look of our new cabinets. An IT cabinet doesn't have to just be a box on the wall any more. The Bay View Collection brings a sophisticated furniture feel to our cabinetry."

Cygnus was founded in 1988. Cygnus manufactures wall mounted computer workstations, medication boxes and articulating arms designed for form, function, and flow. By anticipating the needs of healthcare facilities Cygnus helps relieve intense workloads by developing solutions that keep caregivers close to the patients.
